Summary of Enhancements in RecFind 6 version 2.5

Here is what's new for the upcoming 2.5 release:

- Pick List function added to the web-client, adding the Retention functionality from the smart-client
- Improved support for 64-bit operating systems
- Enhancements to the Workflow function such as the ability to use a stop task after a decision task to end the workflow
- Ability to use System Variables in Boolean/Saved Searches, which will make scheduled reports based on dates (i.e. weekly, monthly report) much easier to configure and use
- Ability to filter the rules shown in the GEM Configuration Screen
- Enhancements to Xchange to make it easier to import database 'views'
- Integration with the new RecFind 6 SDK allowing customers to design and build new user screens and new applications utilizing the RecFind 6 database and core functionality
- Bug fixes to all products in the RecFind 6 Suite:

    1. RecFind Smart-Client
    2. DRM
    3. RecScan
    4. GEM
    5. RecCapture
