

The Becker Group of Companies Inc

Alberta, Canada

The Becker Group of Companies (BGOC) maintains the records for various companies that are involved in the following:

- > Telecommunications
- > Development/Property Management
- > Oil & Gas
- > Computer Software

The BGOC was searching for the most cost-effective solution for returning and sharing information. In 2002 RecFind Corporate, RecQuery TC and RecFind Button from GMB Support Inc. was deployed.

After the BGOC reviewed several vendors and demonstrations in this market, the BGOC determined that RecFind's Electronic Document Management System (EDMS) best met our needs.

RecFind lets our business gain a competitive advantage by giving secured users the ability to immediately access vital information and storage in the document management system regardless of their geographical locations or platform boundaries. This solution has immediately lowered their operating costs by reducing the printing, mail and processing of documents for users across the country. Making information quickly accessible and widely available to their users has instantly improved staff productivity.

Having accessibility to business intelligence is the key to improving communication, increasing productivity and ultimately impacting an organizations bottom line.

RecFind is a cost effective, and easy to implement enterprise-wide solution for information distribution within your corporate infrastructure.

The need for electronic document management is here, and the ability to directly access documents through RecFind has solved that need and has changed the way BGOC business operates.
