

With Uxchange, any organization can fully automate its data exchange requirements moving data in and out of any application, database or data source.

Capture, merge, manipulate and reformat data from multiple legacy systems and create a unified, single repository with a new scalable and accessible data model.

Uxchange:

- Reads data from all commercial database systems including SQL Server, Oracle, DB2, Sybase, PostgreSQL, MySQL, Pervasive, etc., (any database system supporting connection strings).
- Reads data from Excel, Access, CSV files, and virtually any data source.
- Exports data in either industry-standard XML or SQL tables.
- Includes a standard relational SQL Server 'workbench' database that you can configure using high level tools to whatever data model is required for your import and export operations.
- Imports and exports both Metadata and images.
- Imports to and exports from relational models.
- Can be run manually or fully automated for repetitive operations (e.g., capturing data from a legacy system on weekly intervals).

Contact us now to ask how we can help you solve any pressing data exchange or data integration problem. The initial consultation is free.

Uxchange is provided on a monthly subscription basis; you specify the period. Pay for it only as long as you need it.

Don't delay, now you can solve that pressing data integration problem
