

# **Overview**

The world's easiest to use and most powerful records and document management solution

## Both a cloud & an In-house solution

RecFind 6 is a fully complaint Microsoft .NET application with both a 'smart' and 'web' client. It was designed from the outset to be run in the Cloud but can also be run in-house on your own servers.

Reports

RecFind 6 is a complete solution for any organization needing a records and document management solution. The standard product includes all the functionality you will ever require including:

## Search

- Full text, Metadata, Range, BOOLEAN and Saved Searches
- Search across all objects (e.g., file folders, document profiles, archive boxes, electronic documents, etc) with a single search

🔀 Text Search				
Objects To Search				
<ul> <li>File Folder Profiles</li> <li>Document Profiles</li> <li>Box Profiles</li> <li>Attachments</li> <li>Storage Spaces</li> </ul>				
	Text	RecFind	1	
		OR OR	O AND	
	Text	Knowled	geone	
				Search

### **Retention**

- Including multiple options for managing retention such as by a File Plan, Manually, by File Title and Series
- Also includes the ability to apply Legal Citations.
- Includes multiple Hold functionality
- Vital Record review and maintenance
- Can be applied to all objects, e.g., file folders, documents, electronic documents, archive boxes
- Use powerful report writer to produce any report required

The Pick List function is used to manage all retention processes.

# **Electronic Document Capture**

- Easily capture, index and store eDOCs of any type
- Automatic version control

00 × 🚺 < 00	م	
🌗 Organize 👻 📗	Views 🔻 📑 New Folder	0
Favorite Links Documents Recent Places Desktop	Name	Date
	SharedDrives.pdf	20/10
	MICROFISCHE.txt	8/10/
	MICROFISCHE.rtf	8/10/

#### Imaging

- Works with any TWAIN compatible scanner
- Includes standard functionality to convert TIFF images to text and PDF format

TIFF PDF	N 1 Of 1	Q 100%	- 🔒	
JPEG PNG GIF Windows bitmap	Perform OCR and Attac	h Document	- 10 - 10 - 10	

## **Standard Reports**

• A full set of standard reports plus the functionality for you to be able to modify any standard report and create new standard reports

### **Report Writer**

• Fully featured in-built report writer

#### **Saved Reports**

• Easily save and reuse any report

#### Clone

• Easily 'copy' any existing record for rapid data entry

#### **Export**

• Easily export any record or record set in either XML or CVS format

### **Email**

• Easily email any record or record set

## **Global Change**

• Select any record set and apply global changes

## **Administrator Tools**

The DRM is used by the RecFind 6 Administrator to make changes to the RecFind 6 Data Model and any process within RecFind 6.

Xchange is the Import/Export engine for RecFind 6. You can use Xchange to import data from any source and populate any table within RecFind 6. You can also use Xchange to export any RecFind 6 data in industry standard XML format.

Xchange also works with our High Speed Scanning Module (HSSM) to take data captured during forms processing and then automatically populate RecFind 6 tables.

## **Add-on Products**

The RecFind 6 Button is a small check-in/check-out application that runs both in your SysTray and in the toolbar of MS Office products such as Word, Excel, PowerPoint and Outlook. It also runs in Adobe Professional.

It is the ideal low cost way to eDOC enable users who do not require a full RecFind 6 client license. Its functionality includes search, check-in, check-out and document scanning. It is the ideal light-weight, inexpensive app for most of your staff.

The High Speed Scanning Module (HSSM) is specifically designed to automate the scanning process for customers with large amounts of paper to scan and capture. It includes two products.

#### DocScan

Interfaces to any TWAIN compatible scanner and uses barcodes to recognize individual documents in a bulk document feed. Includes functionality to OCR captured TIFF files and convert them to indexable PDF documents. Also includes configurable forms processing functionality.

#### RecScan

Is used to capture the output from DocScan (or any other imaging program) and automatically add documents to the RecFind 6 database. During this automatic process you can also choose to add classification and retention information.

GEM is a new generation, fully-automatic, rules-driven email management and archiving system. GEM attaches directly to your email server and analyzes all incoming and outgoing emails against your rules. It then classifies and adds all required corporate emails to the RecFind 6 database.

The major advantages of GEM are that it monitors and analyzes all emails in a 100% consistent manner and your that staff do not have to do anything, all emails that should be captured are captured and made available to all RecFind 6 users (subject to the security regime you have implemented).

GEM works with any email system, including Gmail and Office365 that support IMAP.

RecCapture is a new generation, fully-automatic, rules-driven electronic document management system. RecCapture deploys 'agents' across your shared drives/folders and automatically analyzes, captures, classifies, versions and stores electronic documents in the RecFind 6 database.

The major advantages of RecCapture are that it monitors and analyzes all eDOCs in a 100% consistent manner and that your staff do not have to do anything, all eDOCs that should be captured are captured and made available to all RecFind 6 users (subject to the security regime you have implemented).

The RecFind 6 Mini-API creates links from an existing application to any object stored within RecFind's data repository. You can integrate any application to RecFind 6 using the Mini-API.

It is a way to 'image-enable' any other application using RecFind to capture and store all required electronic documents and images. It is also a way to access and view the Metadata of physical documents/containers such as paper, file folders and archive boxes where that Metadata is stored in RecFind.

The RecFind 6 SDK has an array of methods that allow you to perform such operations as adding, modifying, deleting records, uploading and downloading electronic documents, retrieving lists of records using searches, and more - all while conforming to RecFind 6's advanced security system.

With this functionality available, you will be able to:

- Easily integrate with existing systems and pass data between them and RecFind 6.
- Change or enhance existing products with different user interfaces that suit your organization.
- Design third party applications to extend and support our many usages (CRM, BPM, Asset Management, HR, etc.).

The RecFind 6 SharePoint Integration Tool was designed specifically to incorporate RecFind 6's powerful EDRMS functionality with SharePoint. The marriage of the two products brings RecFind 6's fully featured electronic document and records management system with functionality like workflow, imaging, full text searching, e-mail management, Outlook, Exchange, portable barcode reader support, offsite storage management and retention to your SharePoint farm.

Easily transfer information to and from SharePoint.

The RecFind 6 web client replicates the functionality of the RecFind 6 smart-client. However, unlike the smart-client the web client does not require any software to be installed on the workstation and neither does it require the .NET Framework to be installed on the workstation.

The web client runs inside multiple browsers and on multiple operating systems like Windows, Apple OS, iOS, Android, etc.

### **Technology**

RecFind 6 was built using Microsoft Visual Development Studio. It utilizes the Microsoft 'smart-client' technology such that any RecFind 6 client can be deployed to work across your network (ADO) or across your Intranet/the Internet (Web Services). As such, any RecFind 6 client can be installed either as a traditional 'fat client' or 'thin client' product. It is a 100% .NET application based

RecFind 6 also includes an optional 'thin' or web client with the same functionality as the smart client and that runs inside most common browsers (e.g., IE, Chrome, Safari, Edge, etc.). As a browser-based client it is relatively OS independent and happily runs on Windows, Apple OS, iOS, Linux, etc.

RecFind 6 connects to data sources using .NET connection strings (it does not use ODBC). RecFind 6 utilizes iFilters for full text indexing of electronic documents.

#### **Prerequisites**

- Windows Server 2008 and above
- Windows 7 and above
- SQL Server 2008 and above
- .NET Framework 4.5
