

Why you should host RecFind 6

“No one knows RecFind 6 better than K1Corp staff”

If you are a RecFind 6 user then you should know that RecFind 6 was designed from the outset to be hosted. In the parlance of today this could mean running RecFind 6 ‘in the Cloud’ though in our case we prefer the term hosted because you will know exactly where your application is being hosted, we will provide you with the full details of the data centre where it is being run. We will also utilize a suitably certified data centre in your country such that no data ever leaves the country.

Given the high costs and technical difficulties of maintaining an in-house configuration the cost and ‘pain-free’ benefits of hosting as opposed to running in-house should be obvious to all; especially to those customers with limited or outsourced IT support and with a high turnover in IT staff.

We also provide significant additional benefits in that as well as provisioning and managing the systems hardware and systems software (e.g., Windows Server and SQL Server) we also manage your RecFind 6 application. We are responsible for ensuring it runs properly and for installing and testing all updates and new releases. We can also make any changes you require to the RecFind 6 configuration. After all, who knows RecFind 6 better than us?

If you have any kind of a ‘problem’ with RecFind 6 or have a problem securing all the expertise you need to successfully run RecFind 6 or just want to lower your direct costs, reduce management workload and reduce the impact of staff turnover then hosting is the ideal solution.

It is also a low cost solution especially as you only pay for the hosting resources you need. We will provision only the server resources and systems software you require; you won’t be paying for more systems resources than you need and your payments won’t be funding other applications. You budget just for RecFind 6 support and you pay a single, fixed monthly fee.

We also provide an end-to-end service where we are responsible for everything including the transfer of your RecFind 6 application from your in-house servers to our hosted environment.

The single fixed monthly fee also includes the hosting charges, maintenance and support. This means there is no annual maintenance (ASU – Annual Software Upgrade) fee to pay; all maintenance costs are included in the single low monthly fee. After the initial twelve (12) months you can also cancel on three (3) months’ notice so there is no long term ‘lock-in’, you retain the freedom of choice.

If you ever want to return to an in-house installation we can also manage the transfer back to your in-house servers; the choice is always yours.
